BGS Restoration: Coronavirus Cleanup Services

With the ongoing spread of COVID-19 (Coronavirus), BGS Restoration would like to take this time to inform you that we are prepared and available to be your trusted partner in COVID-19 cleanup and sanitization. Among the steps that BGS Restoration is taking to ensure that our clients receive immediate and uninterrupted service to reduce risk of liability and risk of infection includes maintaining a highly-trained team of biohazard cleanup technicians, a large inventory of antimicrobial chemicals that are EPA-registered to kill Human Coronavirus, personal protective equipment (PPE), and air fogging machines.

As South Florida's leading EPA-certified disaster and biohazard remediation firm, BGS Restoration provides our clients with rapid emergency response, 24/7. BGS Restoration adheres to all OSHA regulations, is a certified EPA and IICRC firm, and strictly follows the most state-of-the-art procedures when it comes to virus cleanup and disinfection. Because COVID-19 is still novel, BGS Restoration is continually consulting with the CDC for up to date solutions and utilizes CDC and EPA-approved disinfectants.

BGS Restoration's approach to COVID-19 cleanup and sanitization includes cleaning, disinfecting, and properly disposing of all infected materials as biohazard waste, performing fogging and wipe down with CDC and EPA approved chemicals to kill Human Coronavirus, adhering to stringent coronavirus demobilization process for all equipment, trucks, and waste storage areas, and as always – **preserving the confidentiality of all of our clients and projects.**

We look forward to being your trusted partner in coronavirus cleanup and sanitization.

Thank you,

Geraldo Paoliello
Director of Business Development

Overview of Our 5 Step Workflow

RESPOND: BGS Restoration will respond by organizing the Emergency Biohazard Response Team and collecting preliminary information regarding the project. This stage will include opening a project file so that our team can properly document and upload information to United Restoration's cloud once we arrive to the affected location. Additionally, BGS Restoration will obtain the preliminary information in order to deploy the resources needed to begin remediation in a timely manner.

ASSESS: Upon arriving to the scene, the Field Supervisor will work with you in order to assess the site. At this stage, the Field Supervisor will assess any and all safety concerns and begin mitigation protocols to minimize further spread or cross-contamination.

SANITIZE: BGS Restoration's Emergency Biohazard Response Team will begin the sanitization process by fogging a virucide solution that is EPA-registered to kill human coronavirus. Fogging disinfects and kills human coronavirus both on surfaces and in the air. Our team will then perform a wipe down with the virucide solution for customers who ordered either HEAVY or INDUSTRIAL Cleaning. This will include a thorough wipe down of all surfaces and furniture (drawers, door handles, phones, etc). Customers who ordered INDUSTRIAL CLEANING will also be provided with fogging and wipe down of all A/C vents.

DRYING: Once BGS Restoration has performed the sanitization, the site should be left uninhabited for 2-3 hours to allow for proper drying. At this point, it will be safe for humans and animals to return to the property.

Coronavirus Cleanup Pricing Table

BGS Restoration's three tier pricing model includes Standard Cleaning, Heavy Cleaning, and Industrial Cleaning.

When comparing firms, please note that BGS Restoration is certified by the EPA, IICRC, licensed by the Florida Department of Health for Biohazard Treatment and Transportation, and we continuously ensure that all our work is performed in accordance with CDC guidelines. Furthermore, we hold a number of contracts for coronavirus cleanup and disaster restoration with a large number of universities, school districts, cities, and counties throughout South Florida. To that end, you can rest assured that United Restoration is the best value for the best service.

Service Type	Cost / Square Foot	Description
Standard Cleaning	\$ 0.60	Fogging application of EPA-approved Human Coronavirus disinfectant.
Heavy Cleaning	\$ 1.20	Fogging application of EPA-approved Human Coronavirus disinfectant and wipe down of all surfaces.
Industrial Cleaning	\$ 1.80	Fogging application of EPA-approved Human Coronavirus disinfectant and wipe down of all surfaces (complex / large jobs with a high number of surfaces and objects that require sanitization).
Once-Weekly Industrial Cleaning	Discounted Rate	(Same service provided under Industrial Cleaning) This service is most popular with clients who have production facilities, warehouses, and offices with staff continuing to work on site. This option provides the highest degree of protection to the health of staff while preserving the integrity of business operations--before a COVID-19 incident occurs.
